VeeAssets

Know where every asset is.

Scan, track and account for your equipment with one QR code on each asset, on the web and on Android.

AST-000101

DM/LAB/001

Sample label

From spreadsheet to full control

1

Bring in your assets

Add them one by one or upload your Excel sheet. Errors and duplicates show before anything is saved.

2

Label everything

Each asset gets a unique tag and QR code, next to your own tag. Print small, medium or large labels.

3

Scan and record

Check assets out and in with holder, condition, stamped photos and location.

4

Stay in control

See what is out, overdue or due for calibration, run audits and export reports.

Everything your team needs to track assets

QR labels
Print one or many, in three sizes, with or without serial numbers.

Instant scan
Reads QR labels and normal barcodes. Type the tag if there is no camera.

Check out and check in
Holder, due date, condition, two stamped photos and location.

Asset history and map
Every trip, how long it took and the condition it came back in.

Components
Track parts by serial: installed, spare, faulty or sent for repair.

Calibration and service
Status, due dates and a one-tap call to the service engineer.

Excel import
Check the whole sheet first, with errors and duplicates highlighted.

Duplicate flags
Repeated tags and serials are marked, with links to the other assets.

Holders
Employees, vendors and contractors, and what each one has right now.

Live dashboard
What is in, out and overdue, plus calibration due at a glance.

Stock-take audits
Scan on site to find what is missing, misplaced or checked out.

20+ reports
Stock, people, activity, components and finance, in Excel, CSV or PDF.

Web and Android
Use it at the desk or out on site.

English, தமிழ், हिन्दी
Each person picks their language.

Admin and user roles
Control who can do what.
